by ROSALIND CONSTABLE

Martha Jackson died of a cerebral hemorrhage at her summer home in California on July 4th, 1969. She was 82. Her son, David Anderson, long closely associated with her in her work, has been elected president of the Martha Jackson Gallery.

I first met Martha Jackson in 1953 soon after she had opened a little gallery on East 66th Street where she showed the leading postwar, young, Americans-in-Paris, Sam Francis, Paul Jenkins, Claire Falkenstein. Later her gallery (by then a town house on East 66th Street where a show showed the lead-

of all the New York art dealers of that time Martha was the most diligent, travel-

daily by streams of electrons, at the rate of 3 million information bits per second. Television viewing became a daily ritual, a family's life centering around their 16 to 21 inch monocular picture tube within its monolithic console. As receiving sets became smaller and more portable, the assimila-
ation of the TV mosaic into the corporate bloodstream of vibratory inputs became established fact, as commonplace as transistor radios and corner telephone booths.

Early television broadcasting formats mimicked ancient radio iconography, giving meat to the disembodied familiar voices, and visualisation to the fantasy patterns of the sound airwaves. TV created its own figureheads, gargoyles, and abominations, spewing forth never-ending inundations of encapsulated information, exploding frenetically like time seeds within the tribal psyche. The rate of bombardment was ac-
celerated by the vanguard of television marketing demands, the repetitive imprinting process synchronised with the electromagentic beat of cerebral brainwaves. It was only natural that the counter-reaction to this data-spoof-feeding ad nauseum would eventually take the form of indi-

Martha did have the nerve, and her "New Media. Forms" exhibition was a sensa-
tion. ([There were actually two, in June and September, 1960]) Most of the art she showed has long since disintegrated, or been destroyed by the artist. But the ex-
hibitions included many future Pop artists (Oldenburg, Dine, Indiana), Happenings impresarios (Ken Dine, Whitman, Brecht), and even future Minimalists (Bladen, Fa-

In fact, the seeds of almost every movement of the sixties were contained in those two exhibitions. Martha did show Dine for a while, and she invited Kaprow to fill her backyard with old automobile tires, but she never really climbed on any of the new bandwagons. She stayed with her Abstract Expressionists even when interest in some of them had waned. I often wondered why, and one day I asked her. She looked at me in surprise, "I couldn't just desert all my artists," she said. And she never did.

Rosalind Constable is a freelance writer who for twenty years wrote an interro-

ate a Report on the new "junk" artists, at that time exhibiting at the little downtown Reuben Gallery. In the course of a discussion with Martha she decided to bring the Junk art-

at Howard Wise

by JUD YALKUT

"It was the funeral of President Ken-
nedy that most strongly proved the power of television to invest an occasion with the character of corporate participa-

tion. It involved an entire population in a ritual process ... In television, im-
pages are projected at you. You are the screen. The images wrap around you.

"Why has not art been affected by this all-pervading influence? Perhaps quite simply, because, up until now the time was not right. Perhaps it had to await the maturing of the generation who were in their sub-terms in the 1950's, those who were brought up on TV... As in every generation, some were artists... working with TV because they were fas-

Spectrographically probing the television art spectrum, the Howard Wise Gallery is issued invitations to several artists, those already known for their video exploration and those ready to leap into TV from a neighboring art and technology promon-

tory. The conglomerates constellating these individual electronic visionsions, a kaleidoscopic mosaicing of an already mon-

4 color TV sets vs. color echoes, or fog, or...ad which electronically produced. Sometimes you can see yourself floating in air, dissolving in deep water.”—Nam June Paik.

Paik, a pioneer of the “movement” who first exhibited TV abstractions in Germany in 1963, modulates incoming broadcast transmissions with electromagnetic distortions and circuitry modifications, abstracting iconographic clichés beyond all limits of symbological recognition, creating neon-colored moirs of electronic interference patterns, fields of cognitive and nonfigurative imagery interweaving an unfolding Persian carpet of delight.

Sound modulations, hand clapping, singing, screeching, yelling, whistles, the ringing of a bell, all activate the neon tangles of fluorescent tracers, expanding and contracting the frequency modulations within involuted vortices of electric color. Three TV cameras, red, green, and blue eyes, survey the infinity of movements possible to the spectator-performer. Color-separated ghost shadows mirror and re-echo one’s gestures, one’s dance with light, with visual toys, with silence. In total feedback loop, a color monitor facets and fragments the closed circuit images of Charlotte Moorman’s cello improvisations.

“In this case, the sound of the cello she plays will change, modulate, regenerate the picture of her TV-era...one sharp example to humanize electronics...and technology. By using TV as bra...the

“A Möbius strip is a one-sided surface made by taking a long rectangle of paper, giving it a half-twist, and joining its ends...The inside is the outside. The outside is the inside. The picture of you is the picture of you is the picture of you. We are all linked through the medium of art, and all the rest of us is...”—Paul Ryan.

You are sitting in a curtained booth on a stool, a TV aperture hangs before you like a surrealistic picture frame, beyond which the portable video camera sits and observes, as you are prodded ever so gently by calculatedly stimulating questions: “React to the following people: Nixon, your mother, Eldridge Cleaver, Teddy Kennedy, you...for the next ten seconds, do what you want...Now, let your face be sad...let your face grow sad...turn away from the camera...now turn back...press the stop button...thank you.” You watch yourself in full audio-picture recap of your “interview”, erasing all but the fewest frames of the previous tape as your tape will be obliterated by the next.

Said Paul of Everyman’s Möbius Strip, “I feel it’s only a very crude kind of beginning. I’ve been talking about the Möbius strip model and the videotape machine lately as an extension of man as a
In matoi, cull, anic:ting, him'rlf la-liaviour, lit, cnlargq, control tew'ni beltsviour. The machine is almost evb. cof what he is doing; what he transout it takes in, proccesses, and then rend back. Then a person can take that process it, and feed that back. It's a

matter of self-cybernating and self-process-. co-cybernating and co-processing-

resulting out another, videotape play-

onders in slow motion and imitating, or

oung, body languages. That has a whole

set of implications towards what I conceive as bordering body languages. My hope is that we can avoid the professional, the professional who understands everything, and barter on a lateral basis with friends.

The electrical circuitry in the home and the video tape are really a beginning of a kind of elastic information environment in the home. The electric possibilities of com-

mones are just beginning.

Former painter Frank Gillette and former filmmaker Ira Schneider joined forces to produce Wipe Cycle, a nine screen TV mural that served as the entrance and opening piece to T1' a Creative lllsdium. Facing the elevator doors opening into the gallery, the closed circuit cameras of Wipe Cycle instantly integrated the spectator's images in the immediate present and in de-

byed playback. switching with cyclic pat-

ers of broadcast transmission and pre-

programmed videotape, delay change cycles and alternations activating the nine screen matrix.

"Every 4 seconds the live feedback

image exchanged places with the broad-

cast image for 4 seconds—in an 8 second cycle, 4 seconds is taken up by a live feedback of You in the Now, alternating with broadcast in the central monitor. The 4 external monitors exchange images every 8 seconds, and these are the tape programs. The 4 inner moni-
tors exchange places every 4 seconds between the 5 and 16 second delays of the live image. So what you see phenome-
onally, is your image at 3 points in time fluctuating in the center of the mural, while at the outer reaches extraneous col-

lour information is matching locations in its own pattern flux. Overlaid on all this is a 'light' pulse pattern every 2 seconds, going around counter-clockwise, and taking 16 seconds for a complete cycle. So the piece is based on a 2-4-8-16 second basis."—FRANK GILLETTE.

Added Ira Schneider: "The most impor-
tant thing was the notion of information

presentation, an 'in' notion of the integr-
tion of the aura into the information. One sees oneself exiting from the elevator. If one stands there for 8 seconds, one sees oneself entering the gallery from the elevator again. Now at the same time one is apt to be seeing oneself standing there watching Wipe Cycle. You can watch yourself live watching yourself 8 seconds ago, watching yourself 16 seconds ago, eventually feel-
ing free enough to interact with this matrix, realizing one's own potential as an actor."

"The embedment of a TV in clear plast-
tic so that it is totally inaudible, sealed it from all human contact except for plug-

ing and unplugging it. It is a rule of

this civilization. When the TV stops functioning the work is complete."

—JOHN SEERY.

John Seery's TV Time Capsule was the shortest-lived piece in the show. The color TV receiver completely sealed in a plastic cube, fusing and burning itself out by the end of the exhibition's first week. It was re-

placed to run for the last week of the show. It was conceived in a factory, modified by the artist, until its programmed death; its
death is its great creative act—the change of state."

"Art is sometimes called the 'transmi-
tion ecstasy'. Because TV is transmi-
sion with ecstatic potentials . . . why can't the viewer, after a tiring day, sit down at his TV set and listen to music while watching the screen burst with beautiful color displays! These visual
Fantasies would relax you better than any tranquilizer... — Eric Siegel.

Siegel, an ex-prodigy from New York who home-constructed a closed circuit TV at the age of 15, contributed Psychedelitlevision in Color, a ten minute reprogrammed color video-tape in which the image of Einstein gives birth to swirling continuums, four-dimensional whirlpools and sweeping electronic auroras, the two-dimensional phosphor screen transformed into a trip beyond vanishing points.

"In these years I developed devices with patterns, sequences, motion, color, programmed to make the viewer get involved in the unfolding composition, to relax and want more, to develop a new way of seeing. As the requirements of this new art revealed themselves, the need for an instantaneous, flowing, comprehensive device for expressing these images arose. This vacuum was filled by the use of the color television tube as the read-out device for the program apparatus."
— Thomas Tadlock.

Tadlock’s Architect, a monumental electronic console with one black and white monitor displaying the source image such as a baseball game, two smaller black and white monitors recording the stepped segmentation of the permuted image, crowned by a large color tubo radiating an infinite complexity of vibrant radial reflections, pulsing, unfolding, merging towards and surging from the meditative mandala center.

"A pie-shaped triangular section of the broadcast image is removed”, explained Tadlock, “and repeated 8 times in a reverse" repeat around a symmetrical axis. The colors originate in the piece itself, reading out as the sums and differences of black and white areas of different parts of the same signal. The TV call stations are the only patterns that repeat themselves, if the machine is left at the same setting—So you get a complete set of things that are never the same and things that are always the same.” During the brief moments when the TV image is blank except for small interference dots, the kaleidoscopic translation ripples gently in concentric waves upon the phosphor pool.

Black Spiral by Aldo Tambellini, of the Black Gate Electromedia Theater, resulted from a collaboration with Tracy Kinsel and Hank Reinbold of Bell Labs. A high-contrast spiralling white light shimmers, radiates, contracts, twists in orgasmic ecstasy, dwindles to nothing, and blazes forth again on the black video field. Black Spiral was the only piece remaining on after the others retired for the day, a beacon of bidden foreboding.

‘I wanted to convert the TV lines into spiral forms”, commented Tambellini, “using live TV transmission and distorting the image through the circuitry of the set itself. I had been working in slides and film before TV, painting on film as a direct medium, and eventually scratching and drawing lines on the film similar to TV lines. This related to the rapid pacing and abstract blacks and whites of my films, drew me to television as the most powerful hypnotic medium.”

The primeval permutations of TV as an artist’s medium stagger the senses with the potentials of programming on a global scale and within the inner sanctities of the private home. Joe Weintraub sees his AC/TV (Audio-Controlled Television) as a machine “translating music into a complex kinetic image on the screen of any color TV. The brightness is controlled by the volume of the music. The colors are controlled by the pitch. The patterns are dependent upon both. Installation is simple, as the AC/TV clips onto the antenna terminals of any color TV. Patents pending... The AC/TV is radical art because it allows the viewer to turn off the endless stream of garbage and use his Color TV in a personal aesthetically satisfying way.” Radical, marketable, art.

Palk early predicted that “as the collage technique replaced oil-paint in art, the cathode ray tube will replace the canvas”.

Tadlock hopes for a relaxing of the holds upon TV as a medium by government regulatory agencies: “TV has been out for 33 years and only now are artists able to use it. And even a show as comprehensive as TV as a Creative Medium may never be presented on TV itself except within the confines of a building.”

“Eventually”, speculates Ira Schneider, “I’d like one monitor at the North Pole, one at the South, and two at the equator, big monitors switching images back and forth.”

We are witnessing the intermeshing of our globe’s electromagnetic exoskeleton, one day to unite all in one glorious terrestrial aura.
