June 11, 1990

Dear Gottfried,

After a conversation with Peter Weibel and after reflection on our interests in dialectic with the needs of the world as such, we decided that the best form of our participation would be the circumspection of a single field by a cooperative group comprised of four individuals: David Dunn, Terence McKenna, Steina and Woody Vasulka. Our collaboration is supported by the writer/poet, Liz Rymland, whom we hope to include in our enterprise.

Our inquiry would be mapped in the following way: 1. Acoustic considerations of digital space (D. Dunn), 2. Electronic stage and dramatic interaction (Woody Vasulka), 3. Visible language (Terence McKenna), 4. Demonstration by video installation (Steina).

Our central concern is a new definition of space which we call digital space. In our presentations it would break down into perceptual and psychological categories including the principles of acoustic space, pluri-dimensional space, the space-time dialectic between temporal and virtual domains, in a manner formulated and mediated through the concepts suggested in the article titled, Digital Space by Vasulka and Dunn. (Peter Weibel has a copy.)

You may not be familiar with the philosopher Terence McKenna. His articles follow in packages to you and Peter Weibel. We believe his social and aesthetic formulations are vital to some of the evolutionary objectives of visual language and virtual reality. We will conduct a lecture/workshop involving these issues. The workshop will involve tools, some shipped from here, other tools may be available locally. (Steina's installation has a special listing attached.)

We expect our team participation would cost about $20,000 (or so) including artist fees, specific software development for this event and other production expenses. We hope the other expenses as travel, transportation and accommodations will be provided by you. At this point we are flexible and able to negotiate alternatives. We are all immersed in our work and convinced of its utmost importance. On the other hand, it is possible you may consider our participation at Linz this year.

Sincerely,

Woody
TRUE HALLUCINATIONS: Mind and Time, Spirit and Matter

Terence McKenna, author and explorer, has spent the last twenty years in the study of the ontological foundations of shamanism and the ethno-pharmacology of spiritual transformation. He graduated from the University of California at Berkeley with a major in Ecology, Resource Conservation and Shamanism. He has traveled in the Asian and New World Tropics, studying shamanism and ethno-medicine in the Amazon Basin. With his brother Dennis, he is author of The Invisible Landscape and Psilocybin: The Magic Mushroom Growers Guide. A talking book of his Amazon adventures, True Hallucinations, has also been produced. Currently he lives in Hawaii and California with artist Kat Harrison McKenna and their two children. In Hawaii he is the founding secretary-treasurer of Botanical Dimensions, a tax-exempt, non-profit research botanical garden and gene bank devoted to the collection and propagation of plants of ethno-pharmacological interest.

May 25 - An evening lecture - 7:30 pm
New Mexico Repertory Theatre
1050 Old Pecos Trail
$10.00
May 26-27 - Weekend Seminar/Workshop
Santa Fe Actors’ Theatre
430 West Manhattan
Sat. 10-5 / Sun 10-1 pm
$150 (includes lecture)

A Weekend with Terence McKenna

Author and explorer, shamanologist and philosopher, Terence McKenna brings a unique perspective to the idea of a spiritual path for each of us and an impending total transformation of the human world. We will examine human attitudes toward the Other, discuss Time and its mysteries, the nature of language, and the techniques of ecstasy that have developed in non-Western societies to navigate to and from invisible worlds. The role of hallucinogenic plants will be discussed in depth—their role in shamanism, and their impact on the general evolution of human cultures and social forms. The rich historical foundations of modern spirituality will be surveyed and we will discuss making reasonable choices about spiritual development and techniques as well as the roles that we each may play in the proper unfolding of the post-historical future. This is a think-along experience not for the syntactically timid.

Limited enrollment for Workshop. Early Registration recommended.
THE BOHEMIAN INSTITUTE OF PRAGUE

The Bohemian Institute in Prague is envisioned as a cross cultural nexus whose time has come. The Institute will be designed as a think tank/gallery/cafe that will stake out the cutting edge in eco-global and psychedelic ideas and technology. Day to day management would reside with a rotating international staff operating out of a beautiful Baroque building in central Prague or possibly Marienbad. The first formative step would be to establish a site that is a flexible dynamic presence in the Prague scene. This should be a multi-purpose facility able to function as art gallery, club, hostel, publisher, software and video production facility, think tank and attached private apartments for use by the rotating managers and staff. The on site manager will be key to the initial start up effort. What is needed is a manager who is willing to devote himself full time to operating the site for a minimum of six months on an experimental basis. This window of opportunity is roughly from June until December of '92. Timing is important. The Institute's first project will be a film to be shot in Prague during the International Transpersonal Association conference to be held there in mid-June of this year. Funding for this project has already been secured. If we are able to create a compelling and beautiful film about the transformation of modern ideas in the ambience of a Prague spring we shall have a strong argument in the quest for financial angels willing to seriously support a long term effort.
Money is the key. What is needed is start up funding in the range of thirty to forty thousand dollars. This money would be used to raise other money and would be spent over the initial six to eight months to establish the site, provide modest support for the manager, and to launch and promote projects which would sustain the Institute beyond the initial eight months. Such projects as sponsoring artistic and musical events, holding conferences and producing books, tapes, software and videos are contemplated.

The ultimate notion is to join and contribute to the Prague Renaissance and also to establish a locus for an expatriate critique of American society. By creating a community based on art and ideas that are true to the original alchemical spirit of old Bohemia we will make a significant contribution to the impulse toward an Archaic Revival now being felt worldwide. By this process we will make a positive contribution to the changes going on in Eastern Europe and we will be able to participate unhindered in a critique of the high technology, industrial democracies that we will have left behind. A critique that, as we approach the Third Millennium, is sure to grow in intensity.

Media Artists Steina and Woody Vasulka, composer David Dunn and philosopher Terence McKenna will present a lecture in conjunction with a variety of media installations to be exhibited at Ars Electronica. The presentation will focus upon the interconnections between computer graphics and sound, video art, the new sciences of complexity, ethno-pharmacology, and artificial reality research. It will specifically articulate new insights into the evolutionary basis for the creation of virtual reality technologies and the imperative for artists to participate in their development. Through illustrating the profound connection of current media and computer experimentation to the ancient lineage of shamanic and ethno-pharmacological knowledge, the group will attempt to discuss their aesthetic research as part of a larger cultural search for a latter-20th century logos. Integral to this discussion will be a variety of metaphors borrowed from natural and cultural history which not only imply new theories of time and perception but explore the potential for a symbiosis between the somatic and technological aspects of human identity within "digital space" as a new human perceptual environment.
